

Proof of Pythagorean theorem

John Smith, Andrew Jason

Abstract. We give a new proof of the Pythagorean theorem

Анотація. Ми доводимо теорему Піфагора

1. INTRODUCTION

There are two types of environments

- enumerated by two digits:
`theorem, lemma, proposition, claim, corollary, conjecture,
question, notation, property, definition, algorithm, example,
examples, problem, assumption, remark`
- enumerated by three digits: they just have prefix `sub`:
`subtheorem, sublemma, subproposition, subclaim,
subcorollary, subconjecture, subquestion, subnotation,
subproperty, subdefinition, subalgorithm, subexample,
subexamples, subproblem, subassumption, subremark`

2. EXAMPLES

Theorem `theorem` enumerated by two digits:

Theorem 2.1. $x^2 + y^2 = z^2$

Theorem `subtheorem` enumerated by two digits:

Theorem 2.1.1. $x^2 + y^2 = z^2$
